

Specifications

Hydraulic Thermostat

Automatic Ignition Features

- The main burner flame will shut OFF while leaving the PILOT ON
- When heat is required again, the main burner will ignite to begin producing heat.
- The BTU input remains constant while the burner is engaged
- While the burner is engaged, the BTU input consumption will be the maximum BTU rating of the heater.

Upon reaching your preset comfort level, the following will occur:

(Constant BTU input while heater is in operation. BTU input is the heaters maximum BTU rating)

Modulating Hydraulic Thermostat

Milli-Volt Ignition Features

- The BTU input modulates from 8500 BTU to the max BTU rating of the unit.
- When the thermostat is satisfied, the burner will shut OFF while leaving the PILOT ON.
- The visual flame will reduce from a large flame to a smaller flame while continuing to emit heat.
- The overall process contributes to a more efficient consumption of fuel required to burn.

Upon reaching your preset comfort level, the following will occur:

(Modulating BTU input while in operation. The BTU input modulates from 8500 BTU up to the heater's max BTU Rating)
